Korg Introduces GripTune, An Ultra-Compact and Lightweight Clamp-Type Guitar Tuner

Melville, NY - - January 15, 2016 - -Tuning innovator and creator of numerous clip-on tuners, Korg introduces the GripTune, a State-of-the-art clamp-type tuner with a discreet and highly adjustable display. Weighing less than half of an ounce and ultra-compact in size, GripTune can be easily attached to any guitar's headstock for casual yet precise tuning.

In the over 40 years of KORG tuning innovation, the GripTune is the lightest and smallest; it fits easily into the pocket of the users guitar case for easy portability. It is so small that it can be left attached to the headstock for tuning in a natural position.

Despite its small size, the high contrast LED screen provides a large note name display for easy tuning even on a dimly lit stage. Users can adjust the angle of the display section, and use the Reverse function to invert the vertical orientation of the meter; this means users can attach the tuner to either the front or back of the headstock and tune with ease.

The Korg GripTune will be available in the Spring of 2016 for \$19.99. To learn more visit www.Korg.com.
